Safety Guidelines

General Guideline

Do not place any heavy object on the ASR-6000.

CAUTION

Avoid severe impact or rough handling that leads to damaging the ASR-6000.

Do not discharge static electricity to the ASR-6000.

Use only mating connectors, not bare wires, for the terminals.

Do not block the cooling fan opening.

Do not disassemble the ASR-6000 unless you are qualified.

If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Power Supply ⚠ WARNING	AC Input voltage range: 200 Vac to 240 Vac (3P3W) 380 Vac to 460 Vac (3P4W) Frequency: 47 ~ 63 Hz To avoid electrical shock connect the protective grounding conductor of the AC power cord to an earth ground. The power switch that is included in the instrument is not considered a disconnecting device. The permanently connected power input is used as the disconnecting device and shall remain readily operable. a. A switch or circuit-breaker must be included in the installation b. It must be suitably located and easily reached c. It must be marked as the disconnecting device for the equipment. d. It shall be located near the equipment Do not position the equipment so that it is difficult to operate the disconnecting device. Ask for professional technician for installation. The ASR-6000 model shall be employed in rack-based applications and it shall not be connected to external cord directly. In addition, installation shall be done by a qualified person in accordance with local regulations. The ASR-6000 model is not to be used in standalone scenario.
Cleaning the ASR-6000	Disconnect the circuit-breaker or permanently connected power input before cleaning. Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid. Do not use chemicals containing harsh material such as benzene, toluene, xylene, and acetone.

Operation Environment	Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below) Relative Humidity: 20%~ 80%, no condensation Altitude: < 2000m Temperature: 0°C to 40°C (Pollution Degree) EN 61010-1:2010 specifies the pollution degrees and their requirements as follows. The ASR-6000 falls under degree 2. Pollution refers to "addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity". Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence. Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected. Pollution degree 3: Conductive pollution occurs, or dry, non-conductive pollution occurs which becomes conductive due to condensation which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled.
Storage environment	Location: Indoor Temperature: -10°C to 70°C Relative Humidity: ≤90%, no condensation
Disposal 	Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased. Please make sure discarded electrical waste is properly recycled to reduce environmental impact.

Output Terminal Connection

Background	The output terminal can output power in three modes: 1P2W, 1P3W and 3P4W. Select applicable output mode, via panel configurations, in accordance with varied applications.
⚠ WARNING	Be aware of dangerous voltages. Ensure that the power to the instrument is disabled before handling the power supply output terminals. Failing to do so may lead to electric shock.
⚠ CAUTION	After configuring phase settings via the front panel, please make sure the cords connection on the rear panel is corresponding to the set configuration.

1P2W Output Connection

Disconnect the ASR unit from the mains power socket and turn the power switch off before wires connection.

Note	▪ The input & output terminals necessitate connectivity through ring-type connectors. ▪ Grounded Neutral Output for 1P2W output only: ASR-6000 allows for a grounded return on the neutral output. It is suit for the medical industry that required between ground with neutral is 0 V essentially. And possible to mitigate ground loops that is ideal for reduce ground noise and isolate sensitive equipment from the effects of ground loops.
WARNING	Because the neutral has been referenced to the chassis ground, be careful electric shock by yourself.

1P3W Output Connection

Disconnect the ASR unit from the mains power socket and turn the power switch off before wires connection.

Connect the output wires to the AC output terminals as follows:

WARNING	The diagram is only for reference on wiring method. Please proceed to wiring in accordance with the color definitions in your local country.

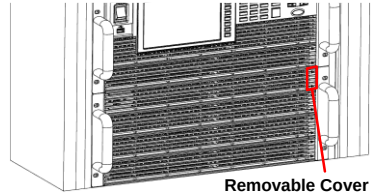
Remote Sensing, EXT I/O and Interface Connection

Remote Sensing	Remote sense is used to compensate for the voltage drop seen across load cables due to resistance inherent in the load cables. The remote sense function can compensate a maximum of 5% of the output voltage and all of output frequency. Based on different 3 output methods, the connections of remote sense vary accordingly. Refer to the following chapters of remote sense connections for each power output method.
WARNING	Dangerous voltages. Ensure that the power to the instrument is disabled before handling the power supply output terminals. Failing to do so may lead to electric shock.
Note	To minimize noise pickup or radiation, the load wires and remote sense wires should be twisted-pairs of the shortest possible length. Shielding of the sense leads may be necessary in high noise environments. Where shielding is used, connect the shield to the chassis via the rear panel ground screw. Even if noise is not a concern, the load and remote sense wires should be twisted-pairs to reduce coupling, which might impact the stability of the power supply. The sense leads should be separated from the power leads.
EXT I/O & Interface	Since EXT I/O & Interface connections relate to several types and connectors, refer to User Manual of ASR-6000 for more details when necessary.

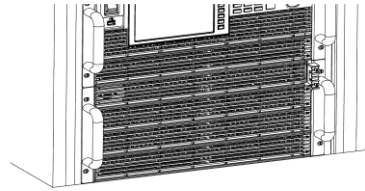
APPENDIX

Firmware Update

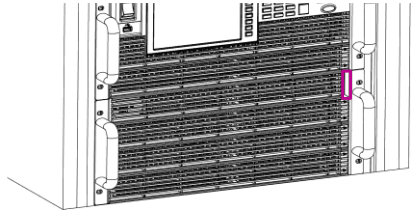
Background	The ASR series firmware can be upgraded using the USB A-type port on the front panel. See your local distributor or the GWINSTEK website for the latest firmware information.
⚠ Note	• Both Master and Slave ASR units are required to be plugged in USB flash drives with the identical firmware version in order to complete update process simultaneously. • To be free from unexpected erroneous issues, please prepare, for example, 4 USB flash drives for 1 Master and 3 Slave units in parallel connection. DO NOT update partial ASR units, e.g., only update Master but without Slave units. • Ensure the DUT is not connected. • Ensure the output is surely off.
Steps	1. Since the USB A-type port is hidden within a plastic frame in Slave unit, please identify the removable cover in the right-side corner of front panel as the figure shown below.



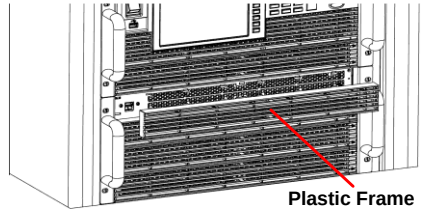
2. Loosen the two screws on the removable cover.



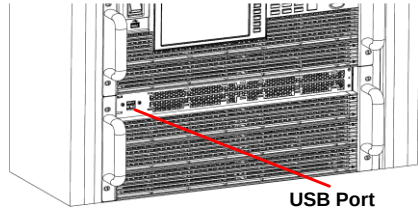
3. The removable cover is removed accordingly.



4. Pull out the plastic frame from ASR Slave unit.



5. The plastic frame was removed and thus the USB A-type port of Slave unit appears.

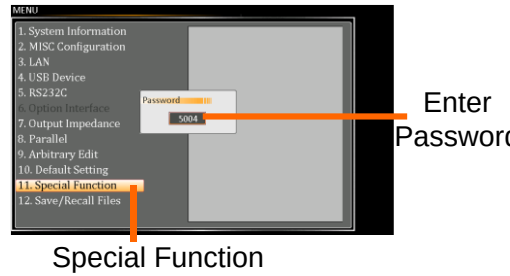


6. Repeat the previous step 1 to step 5 for each connected ASR Slave unit.

7. Insert USB flash drives into the USB A-type ports on front panel of both Master and Slave units. The USB drives should include the **gw_sb6.upg** file in a directory name "gw"(USB\gw:).

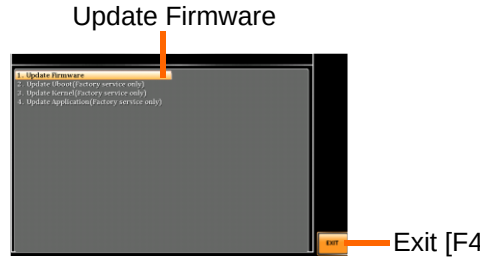
8. Press the *Menu* key on the Master unit. and the Menu setting will appear on the display of Master unit.

9. Use the scroll wheel to go to item 11, *Special Function* and press *Enter*.



10. Key in the password when prompted and then press *Enter*. The password is "5004".

11. Go to Item 1, *Update Firmware* and press *Enter*.



12. Wait for the units to update. Upon completion the units will automatically reboot.

Note

If the following case occurs during update process as the diagram below, it indicates failure of update and please thus contact GWINSTEK or your local dealer.

1) Y connection is three-phase, five-wire, Delta connection is three-phase, four-wire. (Accessories will be provided)
2) In the case of AC-INT mode, the rate output voltage, resistance load at maximum output current, 45 Hz to 65 Hz and sine wave output only.
3) Can be only set in 3P4W mode.
4) For phase voltage setting in polyphase output. In balance mode all phase are collectively set and in unbalance mode each phases are individually set.
5) For an output voltage of 10 V to 175 V / 20 V to 350 V, sine wave, an output frequency of 45 Hz to 65 Hz, no load, DC voltage setting 0V (AC+DC mode) and 23°C ± 5°C. For phase voltage setting in the polyphase output.
6) Line voltage only can be set in balance mode.
7) If the output voltage is higher than rated value, this is limited to satisfy the power capacity. If there is the DC superimposition, the active current of AC+DC satisfies the maximum current. In the case of 40 Hz or lower or 400 Hz or higher, and that the ambient temperature is 40 degree or higher, the maximum current may decrease.
8) With respect to the capacitor-input rectifying load. Limited by the maximum current.
9) External power injection or regeneration which is over short reverse power flow capacity is not available.
10) *For 45 Hz to 65 Hz, the rated output voltage, no load and the resistance load for the maximum current, and the operating temperature range.
11) L1, L2 and L3 phase can be set independ at independ mode in the polyphase output.
12) Can be set only with independ mode in polyphase output.
13) For an output voltage of 50V or higher, sine wave, same load and voltage condition for all phase.
14) In the case of the AC mode and output voltage setting to 0 V, 23°C ± 5°C
15) For an output voltage of -250 V to -10 V, +10 V to +250 V / -500 V to -20 V, +20 V to +500 V, no load, AC voltage set to 0V (AC+DC mode) and 23°C ± 5°C
16) If the output voltage is higher than rated value, this is limited to satisfy the power capacity. If there is the AC superimposition, the active current of AC+DC satisfies the maximum current. And the ambient temperature is 40 degree or higher, the maximum current may decrease.
17) Instantaneous within 3 ms, limited by the maximum current at rated output voltage.
18) For an output voltage of 75 V to 175 V / 150 V to 350 V, a load power factor of 1, stepwise change from an output current of 0 A to maximum current (or its reverse), using the output terminal on the rear panel.
19) 50 % or higher of the rated output voltage, the maximum current or lower, AC and AC+DC modes, THD+N. For the polyphase output, it is a specification for phase

voltage setting.

20) For an output voltage of 100 V / 200 V, a load power factor of 1, with respect to stepwise change from an output current of 0 A to the maximum current (or its reverse). 10% ~ 90% of output voltage.
21) For 5 Hz to 1 MHz components in DC mode using the output terminal on the rear panel.
