# **General Information**

The HP 8447D, 8447E and 8447F are general purpose, wideband amplifiers. Each instrument consists of a power supply and one or two thin film, hybrid, integrated circuit amplifiers. The thin film amplifiers are hermetically sealed and feature low noise, low distortion, flat frequency response, and long term stability and reliability.

The HP 8447D Amplifier is a pre-amplifier that provides 25 dB of gain to signals from 100 kHz to 1.3 GHz. It can be used to increase the sensitivity of any lab, shop or field device operating within its frequency range.

The HP 8447E Amplifier is a power amplifier that provides 22 dB of gain to signals from 100 kHz to 1.3 GHz. It can be used to increase the output power of signal generators, swept sources and similar devices operating within its frequency range.

The HP 8447F Amplifier contains a preamplifier and a power amplifier. They are the same thin film amplifiers used in the HP 8447D and HP 8447E. The input and output ports of both amplifiers are available on the front panel. They can be used separately or cascaded to provide 47 dB of gain.

The HP 8447F Option H64 Amplifier is a general purpose wide band amplifier with Type-N connectors. It contains two preamplifiers. One provides 26 dB minimum gain to signals from 9 kHz to 50 MHz. The other provides 25 dB minimum gain to signals from 100 kHz to 1300 MHz.

| Specifications                                    | HP 8447D<br>Preamp | HP 8447E<br>Power Amp           |
|---|--------------------|---------------------------------|
| Frequency range                                   | 0.1 to 1300 MHz    | 0.1 to 1300 MHz                 |
| Typical 3 dB bandwidth (Std, Opt 001 and Opt 011) | .075 to 1700 MHz   | .075 to 1400 MHz                |
| Mean Gain (20° to 30°C)                           | 25 dB minimum      | 22 dB ± 2.0dB                   |
| Gain flatness across frequency range              | ± 1.5 dB           | ± 1.5 dB                        |
| Noise Figure                                      | <8.5 dB            | <11 dB (typical)                |
| Output power for 1 dB gain compression            | >+7 dBm (typical)  | ≥+12.5 dBm<br>(0.1 to 1000 MHz) |
